EXPERIENCE SUMMARY

Final-year BSc Computer Science with Artificial Intelligence student at Queen Mary University of London with experience in AI, data analysis, and software engineering. Strong analytical and problem-solving skills developed through internships, research, and technical projects. Passionate about using technology and data to solve complex business challenges while working collaboratively in client-focused environments.

EDUCATION

Queen Mary University of London – London, United Kingdom

BSc (Hons) Computer Science and Artificial Intelligence **Sep 2023 – Jun 2026**

- Second Class Honours (Upper Division)
- Relevant Modules: Generative Deep Learning, Artificial Intelligence for Decision Making, Neural Networks and Deep Learning, Algorithms & Data Structures, Object-Oriented Programming, Probability & Matrices, Principles of Machine Learning, Bayesian Decision and Risk Analysis, Data Mining, Big Data Processing

EXPERIENCE

AI Engineer Intern - Haraka **June 2025 - July 2025**

- Designed and deployed AI-driven automation pipelines using Python, OpenAI APIs, n8n, and Langflow.
- Integrated Airtable and webhook-based services to support real-time data ingestion and user interaction.
- Built API-based tools to automate market intelligence workflows for energy and commodity analysis.

Research Assistant – BioD.Scan **November 2025 - February 2026**

- Reviewed and refined a competition proposal for an AI-enabled, multi-sensor IoT biodiversity monitoring platform (vision, acoustics, thermal and environmental sensing).
- Provided technical feedback on the ML methodology, evaluation plan (e.g., F1/mAP), and clarity of the sensor-fusion workflow and deployment strategy.

RELEVANT PROJECTS

Smart Identity Recognition System

- Developed an AI model to forecast air quality, analysing environmental data to support more informed decision-making.
- Built backend, data workflow, and user-facing components
- Supported system integration, testing, and implementation

AI Air Quality Forecasting System – Built an LSTM-based model to predict AQI using real-time data from OpenWeatherMap and OpenAQ APIs.

MindSync – AI Stress Prediction – Predicted stress from calendar data with a Random Forest model and Streamlit dashboard.

2D Hours Race Game – Developed a time-based racing game with OOP and GUI in Java Swing.

Personal Portfolio Website – Designed a responsive one-page website using HTML, CSS, and JavaScript.

Interactive Hangman Game – Created a Python Tkinter game with login, score tracking, and CSV-based word bank.

Smart Car with Obstacle Avoidance – Programmed an Arduino-powered car to detect and avoid obstacles using ultrasonic sensors.

TECHNICAL SKILLS

- **Programming:** Python, Java, JavaScript, SQL
- **Machine Learning:** Supervised & Unsupervised Learning, Deep Learning (CNNs, LSTMs, GANs), Model Evaluation, Feature Engineering
- **Libraries & Frameworks:** PyTorch/TensorFlow, Scikit-learn, Pandas, NumPy
- **Data & Systems:** Data Mining, Big Data Processing (Spark), APIs, Linux
- **Tools:** Git, Flask, FastAPI, ONNX Runtime, FAISS
- **Other:**Problem Solving, Analytical Thinking, Communication, Teamwork, Technical Documentation, Stakeholder, Collaboration

CERTIFICATIONS

- Artificial Intelligence Concepts and Advanced Applications – SDAIA (2025)
- BCG GenAI Job Simulation – Forage (2025)
- Web Development Job Simulation – Moreton Bay Regional Council, Forage (2024)
- Bulk RNA-Seq Analysis Using R – Reuben College, University of Oxford (2025)

EXTRACURRICULAR & VOLUNTEERING ACTIVITIES

- **Mentor — QMUL Buddy Scheme |** 2025–2026
- **Volunteer — Deep Tech Conference (Cranfield University) |** Oct 2025
- **Volunteer — Saudi National Day (Saudi Cultural Bureau, London) |** Sep 2024
- **Member — Machine Learning Society (QMUL) |** Oct 2025–Present
- **Volunteer — Al Mubta'ath Al Mubtaker** (Innovative Scholar Forum), King's College London | Jan 2026
- **Public Relations Coordinator — Saudi Students Club in London |** Jan 2026–Aug 2026

LANGUAGES AND INTEREST

- Languages: Arabic (Native), English (Fluent)
